

**Tecbor®** boards offer several appropriate constructive solutions to protect against fire, depending on the thickness of the boards used. The passive fire protection is conducted in all types of structures and surfaces presented in construction; as well as in industry and tunnel protection

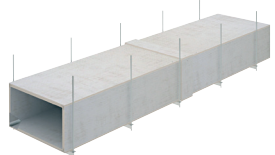

Available in different thicknesses:  
5, 10, 12, 15, 20, 23, 24, 25, 30 y 40 mm.

**Steelwork protection**

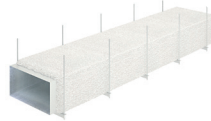

**Cable tray**

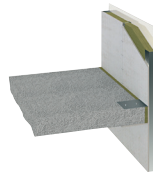

**Ventilation & smoke extraction ducts**

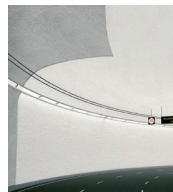

**Non-structural elements.  
Walls**

**Suspended ceiling &  
slabs protection**

**Curtain walls**

**Tunnel protection**

**Tecbor® boards** are presented in two formats with different finish:

■ **Squared edge:** this finish is suitable for constructive solutions where 90° boards meet, as in the case of ducts, tunnels, fire belts barriers, etc.

■ **Tapered edge:** is a unique board with its two long edges tapered, what offers a great finish for solutions such as suspended ceilings, partition walls, wall cladding, etc.
